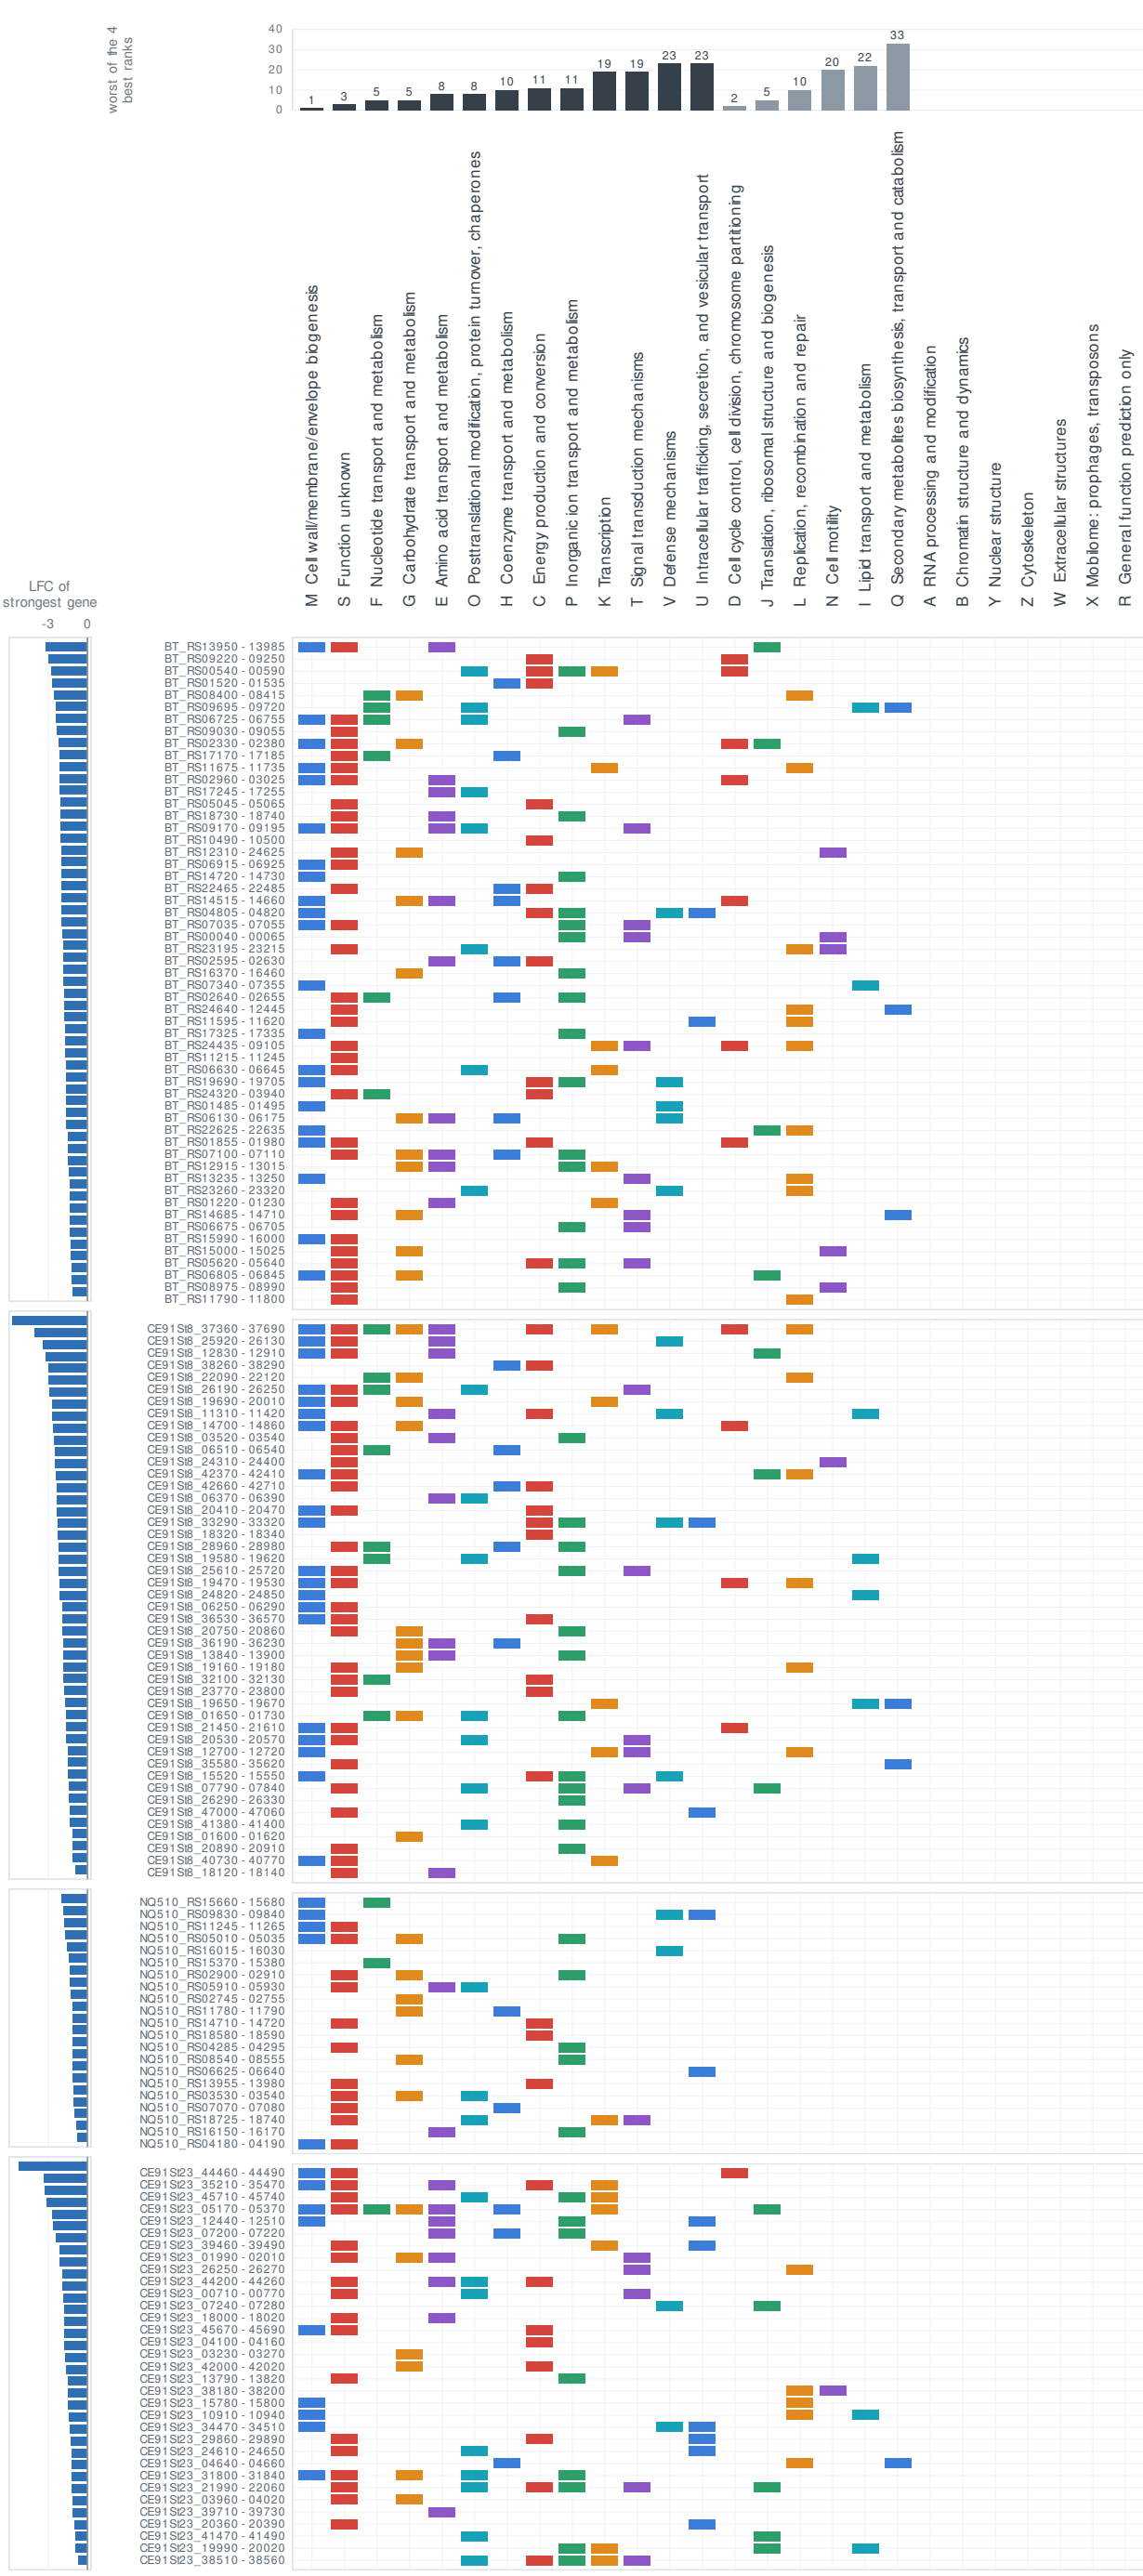
Which COG categories each same-direction DEG locus carries - scheme (A), DOWN loci

157 loci. One row = one locus, labelled by its locus_tag range. Rows are ordered within each strain by the LFC of its strongest gene (most negative first) - the left bars are that LF



A tile is drawn when at least one gene in that locus carries that COG category; a locus can carry several. Colours of the tiles only separate neighbouring columns and are reused - they carry no meaning, and th
